**WHAT WE DO**

The Ingenuity Project provides a proven comprehensive, accelerated math, science, and research program to Baltimore City students in grades 6–12. Our expert math and science teachers deliver a content-rich, rigorous curriculum that prepares students to compete nationally.

**Our Middle School Program** provides students with rigorous STEM courses and experiences that prepare and inspire a pursuit of an advanced STEM curriculum in high school.

**Our High School Program** aligns to the highest standards in math and science to enable students to enroll and succeed in selective colleges and STEM careers.

The program is committed to identifying a cohort of diverse students that reflects the ethnicity, gender, and income of Baltimore City.

**OUR MISSION**

Is to prepare and launch the next diverse generation of nationally competitive STEM (science, technology, engineering, and mathematics) leaders from Baltimore City Public Schools.

---

### BY THE NUMBERS

| **14** | PERFECT SAT Subject Test Scores achieved by the class of 2018. |
| **100** | seats added to the program between 2017 and 2019. |
| **550** | hours spent by our middle school students with their Ingenuity math teachers. |
| **89%** | of Class of 2019 enrolled into competitive four-year colleges. |
| **58%** | enrolled from groups underrepresented in STEM fields. |
| **78%** | alumni majored in a STEM field in college. |
| **17** | POINTS GAINED ON AVERAGE by our middle school students on national math assessments. |
| **24** | Baltimore City zip codes represented by our student body. |

**PERFECT SAT Subject Test Scores achieved by the class of 2018.**

**17 POINTS GAINED ON AVERAGE**

by our middle school students on national math assessments.

**58%**

enrolled from groups underrepresented in STEM fields.

**24**

Baltimore City zip codes represented by our student body.
DEAR FRIENDS

As we reflect on the past two school years, we can’t help but feel a deep sense of pride in the progress made by The Ingenuity Project. As a program, we challenged ourselves to tackle the goal of increasing the number of high-ability students from underserved communities both enrolled in Ingenuity and accepted into selective colleges.

With challenge comes great opportunity. We’re pleased to report that 100% of our first-generation college-bound students in the class of 2018 enrolled in selective colleges and have successfully completed their freshman year.

Achieving this goal began with developing innovative ways to recruit, identify, and support Baltimore’s talent, and then expanding the number of students served by Ingenuity. This path has led us to the very exciting news that The Ingenuity Project will launch a new middle school program at James McHenry Elementary/Middle School in West Baltimore beginning this fall.

We have not reached the finish line yet, though. Our expansion remains a top priority as we strive to achieve the following objectives:

• Continue to add program seats at Mount Royal Elementary/Middle School and Baltimore Polytechnic Institute to expand the pipeline of talent prepared for competitive STEM college programs.

• Enroll qualified applicants in our new middle school location, James McHenry Elementary/Middle School, beginning with 50 sixth-grade students in the 2019–20 school year.

• Launch the new Innovation Practicum pathway, giving high school students opportunities to work with data scientists and applied mathematicians to solve real-world problems.

The Ingenuity Project would not be possible without the dedication of our master teachers. Further, our students could not succeed without our strong partnership with Baltimore City Public Schools and the network of parents, mentors, and tutors who support our students. Finally, we wish to thank you for your steadfast commitment to The Ingenuity Project. Your support makes our program possible.

Sincerely,

Ben Yuhas, Ph.D.

Brandon Jones
Ingenius Project Alumnus,
Poly Class of 2007
Management Consultant with
Boston Consulting Group

Why do you give back to Ingenius as an alumnus?
I give back because I believe Ingenius is truly boosting the outcome of the students and families it serves. From graduating from Duke University with an electrical and computer engineering degree to recently obtaining my MBA from The Wharton School, I know how much I benefited from Ingenius. I want to be able to afford that same opportunity to the students who come after me.

As an alumnus, donating some of the value that Ingenius has created for me so far in my life is a way for me to say thank you and to pay it forward. So, thank you, thank you, thank you, From Gale Fletcher who was adamant about enrolling me in seventh grade to Dr. Goldenberg who gave me a more-than-solid math education. I know all Ingenius faculty and staff are setting other Baltimore City students up for success.

How did Ingenius make a difference for you?
Ingenius made a difference for me most directly in college, thus setting a path for success later down the road in life. When I first got to Duke, freshman year was less daunting because of how prepared I felt for academics. Some classmates were amazed at how quickly I grasped concepts in math and science classes. I had a friend outright ask me, “It seems like you don’t study that long but are doing really well. How are you picking things up so fast?” I attributed that to the education I got in Ingenius. From there, it gave me the confidence to compete with any of my classmates, a lot of them even coming from private school backgrounds.

Gary Pasternack, M.D., Ph.D.
Chief Executive Officer of Asklepion Pharmaceuticals
Ingenius Board of Directors since 1995

In 2008, Gary led Asklepion’s successful efforts to obtain FDA and EMA approval for Cholbam® (cholic acid) in the U.S. and Kolbam® (cholic acid) in the European Union, based on studies of patients with inborn errors of bile acid metabolism, earning a Rare Pediatric Disease Priority Review Voucher from the FDA. Dr. Pasternack is a board-certified pathologist and an inventor on 29 issued U.S. patents.

Why does The Ingenius Project matter to you, and why do you give your time and financial support to the program?
Ingenius offers an environment where students with ability, drive, perseverance, and grit are given the opportunity to thrive. I believe that everyone should have the open opportunity to achieve to the best of their ability. My work with and financial commitment to Ingenius help in a small way to realize that goal.

Stacey Van Horn
Senior Director at the
T. Rowe Price Foundation
Grantor to The Ingenius Project

For over three decades, the T. Rowe Price Foundation has been a catalyst for change in communities. With $111 million in direct grants and matching contributions since 1981, the foundation is making an impact in Baltimore and needy communities around the globe.

Why does the T. Rowe Price Foundation support The Ingenius Project?
We see tremendous value in The Ingenius Project, which we have supported for more than ten years. Ingenius’s rigorous math and science education and unique program model help set the stage for future success for diverse cohorts of students. And, a high percentage of high school program alumni go on to earn STEM degrees.

Brandon Jones
Ingenius Project Alumnus,
Poly Class of 2007
Management Consultant with
Boston Consulting Group

Why do you give back to Ingenius as an alumnus?
I give back because I believe Ingenius is truly boosting the outcome of the students and families it serves. WILL POVELL ‘16

We lost a treasured member of our Ingenuity community in 2018. The Lighthouse Fund was established in memory of Will Povell to support ongoing student engagement services for Ingenuity students beyond the academic rigors of student life. Will’s smile, humor, and warmth will live on as an enduring memory for all who knew him.

2018 IDEA SUMMIT

The Idea Summit, The Ingenuity Project’s principal fundraising event, was held on April 9, 2018 at the American Visionary Arts Museum. This year’s theme, “Solve for (wh)Y,” showcased TED-style talks delivered by Ingenuity students and alumni, fostering learning, inspiration, and wonder among 350 guests in attendance.

The event raised close to $40,000.

STEM PROFESSIONAL NETWORKING EVENTS

For two consecutive years, Ingenuity has hosted a networking event, the Trailblazers’ Tea, to bring high school girls and women in STEM careers together for an afternoon of education, mentoring, and networking. The event was held both years at Brown Advisory, our gracious sponsor and friend. Panelists included professionals in the fields of medicine, neuroscience, chemistry, space engineering, food science, public health, computer science, information technology, and mathematics.

In 2019, Ingenuity also hosted the Innovators’ Breakfast, an event that honored Men of Color in STEM. It brought high school boys interested in STEM careers together with some of Baltimore’s top executives and leaders in the STEM community for a morning of inspiration and learning. The event panelists included a technology leader, company founder, engineering physicist, software developer, mathematics professor, and nationally recognized inventor.
Claire Wayner investigated how bacterial biofilms impact the movement of E. coli pollution through engineered infiltration systems used for filtering storm water. She conducted her research in the Department of Environmental Health and Engineering at Johns Hopkins University under the mentorship of Dr. Sarah Preheim and graduate students Andrea Fraser and Yue Zhang.

When starting out in the Ingenuity research practicum in 10th grade, I didn’t have the clearest idea of what I wanted to research, but I knew that I wanted my work to benefit the environment in some way. With the support of Ingenuity staff, I was able to find the perfect placement at a Johns Hopkins lab researching the water quality of my neighborhood stream, Stony Run. Not only did my research benefit an issue close to home—Baltimore’s urban stormwater pollution—but it also opened my eyes to the field of environmental engineering, which I’m now majoring in at Princeton University as a rising sophomore. Without the guidance that the Ingenuity research practicum gave to me by allowing me to engage in the scientific process at a young age, I do not believe that I would’ve developed the passion I now possess for utilizing engineering to solve our planet’s environmental challenges. I’m incredibly grateful that I had this opportunity, and I hope that generations of high school students after me are able to benefit from this amazing program.

Claire Wayner, Ingenuity Poly class of 2018 / Princeton University class of 2022

Michelle Mokaya conducted an independent research project on the detection of Schistosoma mansoni DNA from filtered urine samples using a multiplex PCR. She worked under the mentorship of Dr. Alan Scott in the Department of Molecular Microbiology and Immunology at the Johns Hopkins Bloomberg School of Public Health.

I am currently an engineering major at Johns Hopkins University, but I am undecided on which concentration I will specialize in. As of now, I am leaning towards chemical engineering or software engineering. Research practicum had a huge impact on my high school experience because I had the opportunity to really put theory into practice during the duration of my project. Not only did I gain great writing skills and become better at presenting my work to large audiences, but the experience also gave me a glimpse at time management, independence, how to communicate with my peers, and other important skills. The rigor of Ingenuity has helped me create a strong work ethic and laid a great foundation for me to practice self-advocacy as I move forward. I am forever grateful that I was able to be a part of such a wonderful program.

Michelle Mokaya, Ingenuity Poly class of 2019 / Johns Hopkins University class of 2023

Rebecca Brody conducted her independent research on the effect of low oxygen on induced pluripotent stem cell-derived endothelial cells. She worked under the mentorship of Dr. Sharon Gerecht and Bria Macklin at the Johns Hopkins University Department of Chemical Bioengineering.

Ingenuity research practicum was a great chance to learn how to work independently. I was able to determine my own schedule based on the tasks I needed to accomplish, and then it was mostly up to me to make sure I stuck to it. This was a nice feeling of freedom compared to the rest of my high school experience and has also been an invaluable skill in college. Research practicum also provided me with connections to graduate students and other professionals in the field I was interested in. My graduate supervisor was happy to answer all of my questions about college and graduate school, from whether I should bring my own fridge to what classes I should take to prepare for an advanced degree. This gave me a better perspective on education and a career in science before I even entered college. One aspect of Ingenuity that has helped me today has been the development of my scientific writing skills. I was able to work on this type of writing in both research practicum and my science classes. I learned how to write clear and concise reports, which has been incredibly helpful in all my classes in college.

Rebecca Brody, Ingenuity Poly class of 2018 / Williams College class of 2022
THE POWER OF PLAY & COMPETITION

On Saturday, December 1, 2018, Ingenuity hosted Mathopoly, a citywide math challenge for fifth-grade students from Gardenville, Govans, Hamilton, Mount Royal, Northwood, Northwood Appold, and Yorkwood. Teams of students trained for six weeks and then competed against each other in math games and trivia contests. The event provided an excellent opportunity to engage with parents and to develop more meaningful relationships with teachers and school leaders who participated as well. As a result of the Mathopoly program over the past two years, Ingenuity has seen an increase in applications of more than 50% from participating schools.

Pictured. This floor game was conceived by Ingenuity math teachers and designed by a volunteer team from Harbor Designs and Manufacturing. The boardgame “Mathopoly®” was created by Will Penner, a middle school math teacher in Canada. (https://mathopoly.ca)

INGENUITY STUDENTS IN THE NEWS!

Timothy Honablu, Michelle Mokaya, and Ingenuity math teacher Dr. Goldenberg were featured in Dan Rodricks’ Baltimore Sun column on Sunday, March 3, 2019. Mr. Rodricks had the pleasure of spending time with Michelle, Timothy, and Dr. Goldenberg at Poly in February as they shared their recent accolades in math and science. Timothy worked extremely hard in the fall of his senior year to submit quality applications to several selective colleges and was rewarded with acceptance to Carnegie Mellon University; Cornell University, Johns Hopkins University; Massachusetts Institute of Technology (MIT); North Carolina A&T State University; University of Maryland, College Park; University of Maryland, Baltimore County (UMBC) Meyerhoff Scholars Program; and Yale University. Timothy shared with Mr. Rodricks that he dreams of studying both theoretical and modern physics and finding ways in the future to bring these two disciplines together to solve problems. Michelle shared her research accomplishments and dreams of continuing her studies in chemical engineering at Johns Hopkins University.

Despite our troubles, there is hope ahead

We could be better. We could be more efficient. - 2012

Do not doubt that great achievements are possible, even when the evidence before you speaks to the contrary.

Despite our troubles, there is hope ahead, and the best things in life may yet be known...

---

Waynee Voorhees Morgan and Timothy Honablu are in the news because they thought to do something great, and then they did it. Waynee’s mom, Morgan, got this story. She wrote it in her notebook and shared it with the world. Waynee is a senior at Poly, and she is the reason for this story. She is a bright, hardworking student who loves to learn. She has always worked hard to achieve her goals and dreams. She is a role model for all of us, and she is an inspiration to those around her.

Waynee is a senior at Poly, and she is the reason for this story. She is a bright, hardworking student who loves to learn. She has always worked hard to achieve her goals and dreams. She is a role model for all of us, and she is an inspiration to those around her.

**EXPANDING BALTIMORE’S STEM TALENT PIPELINE**

Below: James McHenry 8th grade students who participated in the process to select a new Ingenuity middle school.

“James McHenry presented a very compelling application, and the site visit made it clear that it was an ideal school to add to the Ingenuity family. We look forward to working with the school’s talented teachers, leaders, students, and community in the coming years.”

Lisette Morris, Ingenuity Project executive director.

**MOUNT ROYAL EXPANSION**

In 2017-18, Ingenuity began accepting two sixth-grade classes at Mt. Royal Elementary/Middle School, whereas in previous years we only accepted one. Our vision was to consistently enroll two classes each year and grow the program to make it similar in size and structure to the program at Roland Park Elementary/Middle School. In 2017, Ingenuity supported 87 students at Mount Royal. By 2019-20, the program will serve close to 150 students.

**EXPANSION AT BALTIMORE POLYTECHNIC INSTITUTE (POLY)**

Ingenuity’s high school program at Poly has successfully admitted approximately 90 students in ninth grade three years in a row, far exceeding the previous enrollment average of 60 students. This was the first major expansion at the high school level in over ten years and was the result of a significant increase in applications from students across the city. These three cohorts represent top talent from more zip codes and middle schools than ever before. The diversity of the cohorts has sparked exciting innovation and collaboration among a group of incredible student leaders.

**RECRUITING UNTAPPED TALENT:**

**James McHenry Elementary/Middle School**

In 2017, Ingenuity recognized that only 19% of enrolled students came from South Baltimore, and only 7% came from Southwest Baltimore. Access to accelerated and gifted programs in the region was limited. Baltimore City Public Schools, in partnership with The Ingenuity Project, conducted a six-month process to identify a new school site. James McHenry Elementary/Middle School was one of 15 schools to apply for consideration. A committee of education professionals and community members reviewed applications submitted by interested schools. The district and Ingenuity staff then examined the capacity for school buildings to accommodate additional students in the program, the conditions in the community served by the school, and the content of the applications themselves. Site visits were made to the schools that were considered the top applicants.

“We are excited about the opportunity this provides for students in a part of the city where access to rigorous STEM programming has been limited,” said Sean Conley, former chief academic officer for City Schools. “James McHenry has been making great strides as part of a group of schools working in an innovative partnership to improve outcomes for their students. With the placement of Ingenuity at the school, Baltimore’s South side will have 60 additional seats where middle school students can experience challenging, enriching programming that will put them on the path to success.”

**EXPANDING RECRUITING GROWING**
